Vendome and Constantine

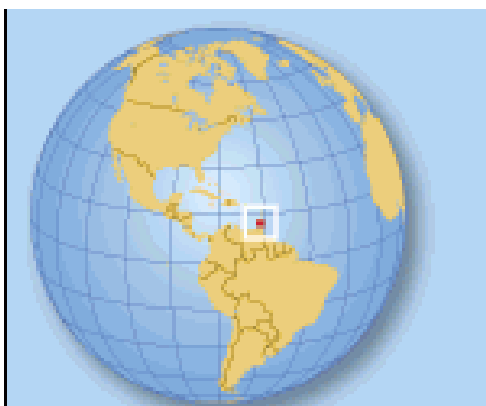

- Biogas Digesters installed on multiple sites.
- Natural pest control agents and low chemical fertilizers produced and used
- RISE training

Reduced
chemical use for
fertilisers and
pest control

Grenada is located at 11° 59' and 12° 20' North latitude and 61° 36' and 61° 48' West longitude. Its land mass is approximately 312 km². The capital of Grenada is St. George's on the West Coast and the second largest town is Grenville, located on the East Coast. The area of principal focus in this State is the Beausejour-Moulinaire Watershed, situated within the parish of Saint George. Within this State, the CATS Programme's longstanding partners are the North East Farmers' Organization and the Department of Fisheries. Interventions have been supported by the

Ministry of Agriculture of the State, the Inter American Institute for Cooperation in Agriculture, the Ministry of Agriculture of Saint Lucia, and the School of Agricultural Forest and Food Sciences of the Bern University of Applied Science, among others.
